The present sequence is that of novel human extracellular messenger (EXMES) Incyte ID NO: 7513017CD1 polypeptide. The protein shows homology to human megakaryocyte stimulating factor. The invention provides EXMES polynucleotides and polypeptides, as well as expression vectors, host cells, antibodies, agonists and antagonists, and methods for diagnosing, treating or preventing disorders associated with aberrant expression of

Their encoding polynucle methods for using the purified EXMESs and/or their encoding polynucleotides for facilitating the drug discovery process, including determining of efficacy, dosage, toxicity and pharmacology, and for investigating the pathogenesis of diseases and
                          proteins from a variety of organisms, including human, dog, cat, ho cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; horse; tomato; monkey; dog; sea urchin; expressed sequence tag; EST; diagnostics; forensic test; gene mapping; genetic disorder; biodiversity;

                                  The present sequence is that of novel human extracellular messenger (BXMES) Incyte ID NO: 7513018CD1 polypeptide. The protein shows homology to human megakaryocyte stimulating factor. The invention provides EXMES polynucleotides and polypeptides, as well as expression vectors, host cells, antibodies, agonists and antagonists, and methods for diagnosing, treating or preventing disorders associated with aberrant expression of EXMES, especially autoimmune and inflammatory disorders, cell

                                          sequences, given in the specification, where the levels are indication the angiogenic index. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating cancoronary artery disease, myccardial ischemia or coronary arteriosclerosis. They can also be used in research, drug discovery forensic medicine involving angiogenesis. This sequence corresponds
                                                                                                                                                             The invention relates to a method of determining the angiogenic index of a tissue or cell sample comprising assessing, in a sample, the expression levels of one or more differentially-expressed gene from any of 34 DNA sequences, given in the specification, where the levels are indicative of the angiogenic index. The methods and compositions of the present the angiogenic index. The methods and compositions of the present
                                                                                                                                                                                                                                                                                                                                                                                                     Determining the angiogenic index of a tissue or cell sample using expression levels of differentially expressed genes, useful for diagnosing or treating cancer, coronary artery disease, myocardial ischemia and/or arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     07-FEB-2002; 2002US-00067482.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc mammalian protein secretion signal sequence. The sequence encoding the coriginal meg-CSF includes exons II-IV and is thought to terminate in the cregion between amino acid residues 134 - 147. The primary transcript of this gene may be cleaved in different ways to yield a family of mRNA's ceach encoding a different MSF protein. Exons V and VI are thought to be crelated to the activity of the factor and are also implicated in the ce stability, folding and processing of the molecule. These exons are also thought to play a role in the observed synergy of MSF with other corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolding of the appropriate structure of the resulting factor, ie. one corrolling of the corrolling of the cellular matrix or extracellular corrolling of the corrolling and non-naturally occurring corrolling corrolling corrolling orders to form different members of the MSF family. (Updated on 25 MBF) and the corrolling corrolling orders to form different members of the MSF family. (Updated on 25 MBF) and the corrolling corroll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The sequence covered by exons II, I and IV encodes megakaryocyte stimulating factor (MSF). This sequence is modified by the addition of an N-terminal sequence encoding a secretory leader, an initiating methionine proceeding exon II and a terminating codon following exon IV. The cDNA sequence given contains sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human MSF; megakaryocyte stimulating factor; tribonectin; alternative splicing; joint boundary lubricant; O-linked oligosaccharide; osteoarthrite; tribosupplementation; tissue adhesion inhibition; friction coefficient reduction; gene therapy; antiarthritic; osteopathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human megakaryocyte stimulating factor (MSF), SEQ ID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       indicates the presence of or predisposition to developing osteoarthritis. The tribonectin and DNA encoding it are useful in the treatment of osteoarthritis, where they may be used for lubricating mammalian joints, such as articulating joints of humans, dogs or horses. The tribonectin, when formulated as a membrane, foam, gel or fibre, is useful for inhibiting adhesion between two surfaces such as the injured tissues of a mammal, where the injury is caused by a surgical insertion or trauma, or an artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue. DNA encoding a tribonectin may be used in gene therapy. The present sequence represents human MSF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MSF-derived tribonectin; a biocompatible composition comprising a human tribonectin for inhibiting tissue adhesion formation; and a method of diagnosing osteoarthritis or a predisposition to osteoarthritis by measuring the amount of MSF or its fragment in a biological sample of a mammal, wherein an increased amount of MSF compared to a control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene. The tribonectin has a polypeptide sequence comprising 1-76 repeats lubricating moiety and has a polypeptide sequence comprising 1-76 repeats of a motif having at least 50% identity to the sequence KEPAPTT (AAB29774). The invention also relates to a nucleic acid encoding a human (AAB29774).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human megakaryocyte stimulating factor (MSF, CACP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1404 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a human tribonectin which is a product of alternative splicing of the human MSF (megakaryocyte stimulating factor) gene. The tribonectin has at least one O-linked oligosaccharide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 3; Page 7; 47pp; English.
                                       New composition comprising the camptodactyly-arthropathy-coxa varapericarditis protein in combination with an anesthetic, useful for treating osteoarthritis, or as lubricants of tissue and joints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; CACP protein; camptodactyly-arthropathy-coxa vara-pericarditis; MSF; megakaryocyte stimulating factor; synovial lubricant; chromosome 1q25-31; osteoarthritis; joint lubrication; osteopathic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of treating osteoarthritis via the cambinistration of a composition comprising the camptodactyly-arthropathy. CC coxa vara-pericarditis (CACP) protein, or portions of the CACP protein. The composition may further comprise a local anaesthetic. The composition of the invention may be administered via intra-articular or intravenous conjugation. The human CACP protein is identified in the invention as being megakaryccyte stimulating factor (MSF). The gene encoding CACP protein (MSF) is located on chromosome 1q25-31, and mutations in this gene are cresponsible for the heritable disorder camptodactyly-arthropathy-coxa converse control of the invention of the composible for the patients have synovial hyperplasia without converse control of inflammation. CACP protein (MSF) acts as a synovium converse converse of inflammation. CACP protein (MSF) acts as a synovium converse c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia of coronary artery disease, myocard
                                                                                                                                                                        The invention relates to a lubricating polypeptide and at least one O linked oligosaccharide. The composition and methods are useful for lubricating joints or other tissues to prevent or treat camptodactylarthropathy pericarditis (CAP) or osteoarthritis in mammals. The pressequence represents the amino acid sequence of the human megakaryocytometric sequence of the sequence of the human megakaryocytometric sequence represents the amino acid sequence of the human megakaryocytometric sequence represents the amino acid sequence of the human megakaryocytometric sequence represents the amino acid sequence of the human megakaryocytometric sequence represents the amino acid sequence of the human megakaryocytometric sequence represents the sequence represents the sequence of the human megakaryocytometric sequence represents the sequence of the human megakaryocytometric sequence represents the sequence

                                                                                                                                                                                                                                                                                                       lymphangiogenesis or angiogenesis in a mammal, and for modulating the growth of mammalian endothelial cells, mammalian endothelial precursor cells or hematopoietic progenitor cells. The polypeptide may also be used for promoting recruitment, proliferation, differentiation, migration or survival of neuronal cells or neuronal precursor cells, and for treating neurodegenerative discorder, e.g. Alzheimer's diseases, Parkinson's disease, Huntington's disease, motor neuron disease, Parkinson's clerosis (ALS), dementia, or cerebral palsy. The present sequence represents a human heparin binding protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Heparin binding protein; Neuroprotective; Nootropic; Antiparkinsonian; Anticonvulsant; VEGF-3 receptor; Anglogenesis stimulator; Gene Therapy; vascular endothelial growth factor reform 3; VEGF-3; angiogenesis disorder; neurodegenerative disorder; Alzheimers disease; parkinsons disease; motor neurone disease; dementia; paralysis; VEGF-C; neurological disease; Huntingtons chorea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to heparin-binding vascular endothelial growth factor receptor 3 (VEGFR-3) proteins and encoding polynucleotides. The heparin binding VEGFR-3 proteins are used for stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New heparin-binding Vascular Endothelial Growth Factor Receptor 3 ligands comprising prepro-VEGF-C, prepro-VEGF-D sequences or fragments, for treating neurodegenerative disorder, e.g. Alzheimer's, Parkinson's, or Huntington's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (LICN )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12-JUN-2003; 2003US-0478114P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The new invention relates to the healing and/or repair of cartilaginous tissue. Described is the use of a compound in the preparation of a medicament for promoting the healing or integration of the cartilaginous tissue in a mammal. Given is the use of a compound that inhibits the post translational glycosylation of lubricin in a cell, or a compound having an antisense first nucleic acid sequence to inhibit the synthesis of lubricin in a mammalian cell, where the first nucleic acid sequence is complementary to a fragment of a second nucleic acid sequence, or one substantially identical to it, that encodes lubricin, thus reducing the concentration of lubricin in the extracellular matrix (ECM) that contacts cartilaginous tissue, in the preparation of a medicament for promoting the healing or integration of the cartilaginous tissue in a mammal. The compound inhibits for example, a glycosyltransferase enzyme, e.g. N-acetylgalactosaminyltransferase, or castilaginous tissue in a mammal than the preparation of a medicament for promoting the healing or integration of the cartilaginous tissue in a mammal. The compound inhibits for example, a glycosyltransferase enzyme, e.g. N-acetylgalactosaminyltransferase, or castilaginous tissue in a mammal than the preparation of the cartilaginous tissue in a mammal than the promoting that contacts are the promoting that 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 galactosyltransferase. The nucleic acid sequence encoding lubricin comprises SEQ ID NO: 1. The compound is useful or treating blunt trauma, chondral fracture, osteochondral fracture, traumatic synovitis, or damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of a compound, in preparing a medicament for promoting the healing integration of the cartilaginous tissue in a mammal.

(A) is useful in the preparation of medicament for lubrication or chondroprotection of a mammalian joint (particularly articulating a joint of a human, horse or dog). The present sequence represents human megakaryocyte stimulating factor (MSF).
                                                                                                                                                                                                                                          New isolated tribonectin comprising a boundary-lubricating amount polypeptide, and an O-linked oligosaccharide group, for use in trearthritic diseases, and to coat artificial limbs and joints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprises nyaturonic acid (1-5 mg/ml) and tribonectin (10-250 mu g/ml) and tribonectin (10-250 mu g/ml) acid described is the use of tribonectin in the preparation of a medicament for the lubrication and chondroprotection of a mammalian tribonection of a mammalian acid the tribonectic of a mammalian tribonectic tribonectic or an acid tribonectic or an acid tribonectic or an acid tribonectic or acid trib

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                             polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. CC shimulation, as anti-inflammatory agents; and in treatment of leukaemias. CC secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                         CC AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CI treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CI that affect the activity of (I) by expressing inactive proteins or to Supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent.

CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK64902 to AAK87694 represent necessary immune/haematopoietic antigen genomic CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                     recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccine; urinary tract infection; bacteraemia; endocarditis; wound; abdominal-pelvic infection.

                                                                                                                                                                                                                                                                                             (GPCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as Huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiowascular disorders such as thrombosts, myocardial infarction, cardiowascular disorders such as thrombosts, myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          neurological disorder; Huntington's disease; dementia; obesity; metabolic disorder; Parkinson's disease; Tourette's syndrome; tippe 2 diabetes; cardiovascular disorder; myocardial infarction

                                                                                                                                                                             This invention relates to novel, isolated full length human cDNA CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capping method, where none of these CC clones are identical to any known human mRNAs. The present invention CC describes an immunoassay to identify agonists and antagonists, as well as CC antibodies, antisense molecules and siRNAs that can all be used to bind CC and modulate expression of the cDNA molecules. As such, these CC molecules are useful for diagnostic markers or therapeutic targets for CC the various diseases or morbid states. In particular, they are useful in CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's CC disease, Parkinson's disease, dementia, short memory and various cancers, CC as well as for maintaining equilibrium of sense or motor function, and CC as well as for maintaining equilibrium of sense or motor function, and CC cytostatic and tranquiliser activities. This particular accordingly, CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, CC cytostatic and tranquiliser activities. This sequence is not given in the sequence of the invention. NOTE: This ceftical be obtained on CD-ROM from the European Patent Office, Vienna Sub-

                                                                                                                                                                                                                                                                                                                                                                                                      including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa poppides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment c pathological conditions resulting from bacterial infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polymucleotide sequences AAH51947 - AAH52092 represent DNA encoding proteins AAGB1096 - AAGB1241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the function of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying nucleotide or polypeptide sequence for use as drug target, involves providing algorithm that analyzes a functional relationship between nucleotide or polypeptide sequences, and comparing the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-NOV-1999; 99US-0165086P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated human G protein-coupled receptor (GPCR) polypeptide that is related to the MAS proto-oncogene receptor subfamily. The polypeptide comprises a fully defined sequence of 289 amino acids as given in the specification, or its fragment comprising 10 contiguous amino acids, or an amino acid sequence of an allelic variant or orthologue of the amino acid sequence given in the sequence. The polypeptide is useful for identifying a modulator of a GPCR polypeptide or an an agent that binds to it. The polypeptide is also useful for treating a disease or condition mediated by human proteases. The present sequence is the polypeptide of the invention

of the invention; methods of treating, preventing or diagnosing diseases compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic compounds of the invention; a mouse comprising a computation in a GPCR gene of the invention; a mouse comprising a computation in a different GPCR gene of the invention; and kits comprising composes which hybridise to GPCR polymucleotides of the invention. The comprising a GPCR mucleic acid. The GPCR polymeptides and vectors comprising a GPCR mucleic acid. The GPCR polymeptides and vectors comprising a GPCR mucleic acid. The GPCR polymeptides and vectors comprising a GPCR mucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, comprising a GPCR mucleic acids and proteins may compared to the adrenal gland; disorders of the colon or intestine composession, diabetic neuropathy, Parkinson's disease or schizophrenia); composersion, diabetic neuropathy, Parkinson's disease or schizophrenia); composers of the adrenal gland; disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., angina, cardiac arrhythmia or composers (e.g., angina, cardiac arrhythmia or composers); bone and joint disorders (e.g., astoimmune disorders (e.g., atoimmune disorders (e.g., atoimmune disorders (e.g., atoimmune disorders (e.g., acident printiple); and disorders of the kidney, liver, lung, breast, ovary, composition, parking, preast, ovary, and the printed specification; those sequence represents a GPCR of the colon or the printed specification; those sequences not shown were obtained in celectronic format directly from WIPO at this patent did not form part of the printed specification; those sequences not shown were obtained in c

mouse comprising a GPCR gene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polynucleotides of the invention. The invention further discloses variants of the GPCR polypuptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurolicital discourse for the comprision of the diagnosis, treatment or prevention of a wide variety of diseases including neurolicital discourse for the comprision of a wide variety of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                kidney disorder; liver disorder; lung disorder; breast disorder; ovary disorder; uterus disorder; prostate disorder; testis disorder; skin disorder; stomach disorder; pancreas disorder; spleen disorder; thymus disorder; thyroid disorder; antiparkinsonian; antimanic; cytostatic; antiinflammatory; vasotropic; antidarrhoeic; antidiabetic; NS; central nervous system; respiratory; antidarrhoeic; antidiabetic; virucide; hepatotropic; antibacterial; antianaemic; antiesborrhoeic; dermatological; antiulcer; antithyroid; antiallergic; anorectic; dermatological; nephrotropic; gene therapy; GPCR modulator; human;
                                        uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus thyroid (e.g., cancers). The present sequence represents a GPCR of invention. Note: The full sequence data for this patent did not for of the printed specification; those sequences not shown were obtain electronic format directly from WIPO at
                                                                                                                                                                                                                                                                             AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatold arthritis, gout or osteoaporosis); metabolic or nutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diseases including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., angina);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09-SEP-2002; 2002US-0409303P

                   Sequences AAU2554-AAU25616 represent human G-protein coupled receptor (GPCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a gPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as
                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid encoding a new G-protein coupled receptor polypeptide for detecting receptor modulators that can treat mental disorders, such as schizophrenia, anxiety, depression, or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-JUN-2000;

                                                                                                                  The present sequence represents a human guanine nucleotide binding protein (G protein)-coupled receptor protein designated TGR15. TGR15 has nootropic, antinflammatory, vasotropic, immunomodulator and cytostatic activities. The TGR15 polynucleotide and protein can be used in gene therapy and protein therapy. G-protein coupled receptor proteins are cell membrane proteins which mediate the cellular response to a large variety of signalling molecules. The TGR15 polynucleotide and protein can be used in the diagnosis, treatment and prevention of diseases including neurological, inflammatory, circulatory, degenerative, immune system and discretive diseases.
                                                                                                                                                                                                                                                                                  G-protein coupled receptor protein TGR15 of human origin and DNA encoding it for diagnosis and treatment of cancer and circulatory and other diseases associated with its expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiomyopathy and atherosclerosis, viral infections caused by HIV

                                                                                                                                                                      The invention comprises the amino acid and coding sequences of human secreted proteins (SECP). The human SECP DNA and protein sequences of tinvention are useful for the treatment and prevention of cell proliferative disorders (e.g. actinic keratosis, arteriosclerosis, bursitis, hepatitis or cancer); autoimmune/inflammatory disorders (e.g. ALDS, asthma, anaemia, allergies or atopic dermatitis); cardiovascular disorders (e.g. congestive heart failure, ischaemic heart disease, myocardial infarction, hypertensive heart disease, or vascular tumours) neurological disorders (e.g. epilepsy, stroke, cerebral neoplasme, or Alzheimer's disease); and developmental disorders (e.g. renal tubular acidosis, Cushing's syndrome, Duchenne and Becker muscular dystrophy, chypothyroidism). The present amino acid sequence represents a human secreted protein (SECP) of the invention
                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human secreted proteins and nucleic acids useful in diagnosing, treating and preventing cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, and developmental disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB; ABT11179.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a new isolated nucleic acid encoding a Klebsiel pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Seguence 437

A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-FEB-2002; 2002JP-00045728

                                                                                                                                                                                                                                                                                                                                                                          useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 reaction (PCR) primers, oligomers, and for chromosome and gene mappi
and in recombinant production of (II). The polymucleotides are also
in diagnostics as expressed sequence tags for identifying expressed
genes. (I) is useful in gene therapy techniques to restore normal
activity of (II) or to treat disease states involving (II). (II) is
                                                                                                                                                                              and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                         Sequence 1923
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 reaction (PCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutatresponsible for genetic disorders or other traits and to asse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Drmanac RT,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2000; 2000US-00540217.
